PROJECTS

Bulk Transactions through asynchronous processing and enhanced security

Leading the development of a project to automate bulk transaction processing using Spring Boot. Implemented asynchronous processing with ActiveMQ for speed, security, and efficiency. Ensured rigorous validation, seamless transfer, and secure storage, enhancing scalability, fault tolerance, and compliance with regulatory requirements while optimizing resource utilization and cost-effectiveness.

Enhancing Water Quality Prediction using Ensemble Modeling

Built an ensemble machine learning model to predict water potability. Analyzed water quality data (pH, hardness, etc.) to classify safe drinking water. The model addressed class imbalance and reduced overfitting, leading to more reliable water quality assessments.
